

WIND

Wind Transmitter "First Class" Advanced

Part number: 4.3351.00.000

The wind transmitter is designed for the acquisition of the horizontal component of the wind velocity in the field of meteorology and environmental measuring technology, evaluation of location, and measurement of capacity characteristics of wind power systems. In the plain country the wind transmitter meets all requirements of IEC 61400-12-1 for an Instrument of the accuracy class 0.5. Special characters are a defined and optimised, dynamic behaviour also at high turbulence intensity, minimal over-speeding, and a low starting value.

The measuring value is available at the output as digital signal. It can be transmitted to display instruments, recording instruments, data loggers as well as to process control systems. For winter operation the instrument (4.3351.00.000) is equipped with an electronically regulated heating, which guarantees a smooth running of the ball bearings, and prevents the shaft and slot from icing-up.

Specification

Part number: 4.3351.00.000

| Wind speed | |
|---------------------|--|
| Measuring range | 0 ... 75 m/s |
| Accuracy | < 1 % of meas. value (0.3 ... 50 m/s) or < ±0.2 m/s |
| Linearity | r > 0.99999 (4 ... 20 m/s) |
| Delay distance | < 3 m (aac. to ASTM D 5096-96) |
| Data output digital | |
| Frequency | 1082 Hz at 50 m/s |
| Operating voltage | |
| Electronic | 3.3 ... 48 V DC 130 µA from 3,3 ... 15 V 180 µA > 15 V |
| Heating | 24 V AC/DC, max 25 W |
| General | |
| Ambient temp. | -50 ... +80 °C |
| Electr. connection | 8 pol. plug connection |
| Mounting | onto mast tube Ø 1'' |
| Protection | IP 55 |
| Survival speed | 80 m/s (min. 30 minutes) |
| Weight | 0.5 kg |
| Fixing boring | Ø 35 x 25 mm |
| Material housing | aluminium, anodised |

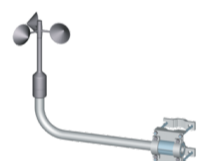

Material cup star

carbon-fiber glass reinforced
